THE NEW WORLD STANDARD

FORTRESS

BY SHEARCORE™

FORTRESS PRODUCT LINE FOR THE
DEMOLITION &SCRAP RECYCLING INDUSTRIES

SHEARCORE.COM
Bruce Bacon - President

Bruce Bacon has been a part of the scrap recycling industry for the past 30 years. He started out as a regional sales manager for Roy LaBounty, a man he considers his mentor. He then brought innovation to the mobile shear market when he co-founded Genesis Equipment. After a brief departure from that market, he is back at it – helping create the most cutting edge mobile shears for the scrap and demolition markets. His philosophy isn’t complicated. In his own words, “We operate under a simple belief, hire great people, deliver the best product, and focus on customer satisfaction.” His passion for the product and the industries we serve is contagious and great talent continues to follow him.

Ross Christenson - Lead Design Engineer - Shears

When ShearCore was still just an idea, we knew there was a non-negotiable point in the business plan. We had to have Ross Christenson. His reputation for sophisticated, yet simple designs, coupled with decades of experience and logical, innovative engineering are things we couldn’t do without.

With Ross on board, and a clean slate, ShearCore is now manufacturing the Fortress attachment line including a mobile shear that is powerful, structurally sound and has a reduced number of parts due to its advanced design.

Jim Campbell - VP of Operations

When it comes to manufacturing mobile shears, nothing matters more than experience, and no one has more than Jim Campbell. When you combine Jim’s knowledge and passion with state of the art machining centers, a new factory and a hand picked crew of welders, machinists, painters and assemblers, you have the best the industry can offer.

Fortress attachments are designed for manufacturability. Our state-of-the-art mills allow us to use approximately half of the number of weldments compared to other shears. Fortress - Manufactured with excellence.
FS SERIES
Mobile Shear

- Innovative engineering with an optimized structure for long life and high strength to weight ratio
- Designed with maintenance in mind - large access panels are removable for component replacement

Extra wide bearing bushings allowing for decreased overall tension

Extra long stroke means the teeth blades always align - even if the edges are worn

Cylinders are equipped with a load holding valve which secures the load if oil pressure is cut off

High torque motors allowing the grab to be in any position

Replaceable Hardox steel cutting teeth

Strong rotating headpiece and an oversized, double slewing ring

OilQuick is an Automatic Hydraulic Quick Coupler system offered on Fortress products

18 years in the industry - “I came out of retirement and joined ShearCore because of the product lines we offer and the spirit, drive and integrity of the people in the organization. It’s such a pleasure to work with a group of designers and engineers that are setting world standards and breaking production records on a daily basis.”

Ian Lewandowski
